Re: Letter of Intent: Platform Evaluation Pilot & 12-Month Software Access

About German Shepherd

German Shepherd turns any address into a physical risk surface using public and passively gathered data: wireless signals, corporate OSINT, exposed infrastructure, and the planning record. No active intrusion, no policyholder disclosure. Its thesis: *we show insurers what attackers already know about their policyholders*.

This letter sets out the terms of a pilot engagement between German Shepherd and Bolttech, under which Bolttech will evaluate the German Shepherd platform for integration within its embedded protection and underwriting workflows, and for distribution to its insurance provider network.

Bolttech's position across device, property, and SME risk products makes it a strong distribution partner for German Shepherd. Building-level intelligence, drawn from passive signals, corporate OSINT, and the planning record, adds a risk dimension that existing underwriting data sources do not cover. This pilot is structured to validate that signal in a live, commercial context.

The undersigned hereby expresses intent to proceed on the following basis:

- Pilot value of £20,000 covering the initial evaluation phase across a defined set of
- policyholder building profiles agreed between both parties.

- Bolttech to receive 12 months of full German Shepherd platform access, including live wireless signal scanning, corporate OSINT, exposed infrastructure mapping, planning
- record lookup, and the building intelligence graph.

- Upon full product launch, Bolttech will receive one additional month of platform access at
- no charge.

- Bolttech will have the right to distribute and resell the German Shepherd platform to its
- insurance provider network under terms to be agreed in a formal commercial agreement.

- Both parties to collaborate on use-case scoping, technical integration, and signal-to-risk
- mapping within embedded protection and SME risk verticals.
 - Progress toward a formal commercial agreement subject to satisfactory pilot outcomes.

Deliverables

Building intelligence reports	Detailed risk profiles for an agreed number of policyholder sites, covering wireless exposure, OSINT findings, infrastructure vulnerabilities, and planning history.
Signal-to-risk mapping document	A structured mapping of German Shepherd data signals to Bolttech underwriting variables across device, property, and SME risk product lines.
Integration specification	Technical documentation outlining how German Shepherd outputs connect to Bolttech's existing underwriting and distribution infrastructure.
Pilot evaluation report	End-of-pilot summary covering coverage metrics, data quality, risk signal accuracy, and a recommendation on full commercial rollout.
Reseller onboarding pack	Documentation and tooling to enable Bolttech to package and distribute the German Shepherd platform to its insurance provider network.
Platform access (12 months + 1)	Full access to all German Shepherd platform features for the duration of the pilot and beyond, with one bonus month granted upon full product launch.

Warm regards,

Baldev Singh
