Re: Letter of Intent: Building Intelligence Pilot and 12-Month Platform Access

About German Shepherd

German Shepherd turns any address into an intelligence surface using public and passively gathered data: wireless signals, corporate OSINT, exposed infrastructure, and the planning record. No active intrusion, no disclosure required. Its thesis: *we show you exactly what anyone can already see about your physical space.*

This letter sets out the terms of a pilot engagement between German Shepherd and Upahaar, under which German Shepherd will deliver a full building intelligence profile of Upahaar's Nashik office and provide 12 months of platform access for evaluation and ongoing use.

Upahaar's physical office in Nashik represents the primary site for this engagement. German Shepherd will surface everything that is publicly visible and passively observable about the building, its wireless environment, its corporate footprint, and its infrastructure, giving Upahaar a complete picture of its physical risk surface.

The pilot proceeds on the following basis:

- Pilot value of £30,000 covering the full evaluation and delivery phase across Upahaar's
- Nashik office and any additional agreed sites.

- Upahaar to receive 12 months of full German Shepherd platform access, including live wireless signal scanning, corporate OSINT, exposed infrastructure mapping, planning
- record lookup, and the building intelligence graph.

- Upon full product launch, Upahaar will receive one additional month of platform access at
- no charge.

- German Shepherd to deliver a complete intelligence report on the Nashik office, with
- findings presented in a structured, actionable format.

- Both parties to collaborate on scoping any additional sites or use cases identified during the
- pilot.
 - Progress toward a formal commercial agreement subject to satisfactory pilot outcomes.

What German Shepherd Will Deliver

Building intelligence report	A full risk profile of Upahaar's Nashik office covering wireless exposure, publicly visible infrastructure, corporate OSINT findings, and the complete planning and structural record of the site.
Wireless signal scan	Live mapping of all SSIDs, signal strengths, and wireless exposure around the office, showing exactly what is visible to anyone in range.
Corporate OSINT profile	Subdomains, exposed infrastructure, tech stack, and publicly visible corporate data associated with Upahaar's digital and physical footprint.
Infrastructure visibility report	A breakdown of what is publicly exposed at the network and infrastructure level, including any services visible to external parties.
Platform access (12 months + 1)	Full access to the German Shepherd platform for 12 months from pilot start, plus one additional month at no charge upon full product launch.
Pilot evaluation summary	End-of-pilot report covering findings, coverage, and recommendations for ongoing use or expansion to additional sites.

Warm regards,
